SUMMARY

Backend-focused Software Engineer with 2+ years building high-performance, secure, production-ready systems, now extending into Generative AI and agentic workflows. Expertise in API design, cloud infrastructure, identity management, and DevOps. Skilled in Django, PostgreSQL, Redis, Keycloak, AWS, LangGraph, and RAG, with strong algorithmic foundations (400+ LeetCode problems solved). Open to backend, AI/GenAI, full-stack, and platform engineering roles.

TECHNICAL SKILLS

Backend: Django, DRF, REST APIs, Celery, Java, Gunicorn, Spring Boot

Frontend: React, React-Native, Angular

Gen AI: LangChain, LangGraph, OpenAI Agents SDK, RAG, Vector Search, Prompt Engineering, MCP

DevOps & Cloud: Docker, Kubernetes, Jenkins, Nginx, Ansible, AWS (EC2, S3, RDS, Lambda, SQS), OCI

Databases: PostgreSQL, MySQL, Redis

Security: Keycloak, OAuth2/OIDC, RBAC, PII Encryption

Messaging: Kafka, Microservices Architecture

Monitoring: Grafana, Kibana, AppDynamics

Testing & Docs: pytest, unittest, Swagger

Other: Git, Data Structures & Algorithms

PROFESSIONAL EXPERIENCE

Solution Analyst | Sankey SolutionsSept 2024 – Present

- **Agentic AI:** Built an agentic AI chatbot for automated data analysis and dynamic report generation using LangGraph and OpenAI, with custom tools, SQL-based RAG, vector search, and streamed responses.
- **Serverless AI Pipeline:** Developed a customer-feedback processing system using Python, OpenAI Agents SDK, and AWS Lambda, SQS, and DynamoDB for sentiment analysis, topic classification, and summarization.
- **System Architecture:** Engineered scalable REST APIs using the Factory Pattern with Django ORM; optimized PostgreSQL schemas with PII encryption and strategic indexing, reducing query latency by ~40%.
- **Performance Engineering:** Implemented multi-layer Redis caching for vehicle telemetry data, cutting external API overhead by ~60% and average response times from ~800ms to under 200ms.
- **Security & Identity:** Integrated Keycloak for OIDC/OAuth2 authentication and RBAC, architecting a secure multi-tenant admin system for a fleet platform serving 10,000+ vehicles.
- **Cost & Reliability:** Migrated AWS RDS to right-sized instances for ~30% cost reduction while meeting throughput SLAs and resolving critical production bottlenecks for 99.9% uptime.
- **Data Pipelines:** Built automated Cron-driven aggregation workflows for high-velocity telemetry, reducing redundant API calls by ~50% and improving reporting efficiency.
- **DevOps & Deployment:** Streamlined releases with Gunicorn and automated migration-revert strategies, enabling zero-downtime deployments and safe rollbacks.
- **Domain Features:** Developed duty/trip tracking, geofence processing, and scheduler-driven Excel report generation for a fleet and transit management system on a microservices architecture, using Celery for async and scheduled jobs.
- **Observability:** Used AppDynamics, Grafana, and Kibana to monitor services and pinpoint production bottlenecks.
- **Security Compliance:** Triaged and documented Checkmarx scan findings (CVE justification, exploitability, risk) for the trip service.
- **Quality & Docs:** Wrote unit tests with pytest/unittest and documented REST APIs with Swagger.

Cybersecurity Trainee | ACMEGRADEJune 2023 – Sept 2023

- Hands-on with Linux, core cybersecurity principles, and web vulnerabilities (SQL injection, XSS); applied hardening techniques to protect web applications.

PROJECTS

- **Fleet Telemetry Dashboard (Django, React, PostgreSQL, Redis, WebSocket):** Real-time vehicle telemetry dashboard with live WebSocket updates, Redis caching, and Keycloak role-based access control.
- **Secure Auth Service (Django, Keycloak, OAuth2/OIDC, PostgreSQL):** Multi-tenant authentication service with OIDC token exchange, RBAC permission model, and audit logging for compliance.
- **LeetCode Algorithm Tracker (Java, Python):** Solved 400+ problems across arrays, graphs, DP, trees, and system design, with a structured categorization system for revision.

EDUCATION

Bachelor of Engineering (CGPA 8.45) | Pillai HOC College of EngineeringFeb 2021 – Apr 2024

- Coursework: DSA, Operating Systems, DBMS, Computer Networks, Software Engineering • GATE 2023 Qualified

CERTIFICATIONS & ACHIEVEMENTS

- AI-ML Course Certification • Web Development Bootcamp (Udemy) • Cybersecurity Training (ACMEGRADE)
- Java Optimization Challenge 2024: Full Score (80/80) • Learner of the Quarter

ADDITIONAL INFORMATION

Languages: English (Fluent), Hindi (Native), Marathi (Native) **Location:** Thane, Mumbai, Pune — open to relocation and remote work.
